Santhana Keveen A

Front-End Web Developer (React JS)

+91-7695971980 — kevinkevi2003@gmail.com — linkedin.com/in/kevin003 — github.com/Santhanakevi333 — Coimbatore, Tamil Nadu

Professional Summary

Front-End Web Developer with 1+ year of professional experience building production React.js and TypeScript applications for a renewable energy company. Delivered four live forecasting platforms with interactive dashboards, real-time weather maps, and custom WebGL visualizations. Strong in REST API integration, API optimization (pagination, caching), and responsive UI with Tailwind CSS.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend: React.js, Tailwind CSS, Zustand, Recharts, Responsive Design, Web Workers
Mapping and Visualization: MapLibre GL JS, WebGL 2, GLSL Shaders, GeoJSON, OpenStreetMap
Backend and APIs: REST APIs, OpenAPI, Node.js, Express.js, MongoDB, Supabase, Gemini API, Caching
Tools: Git, GitHub, Vite, Vitest, VS Code, Chrome DevTools
Spoken Languages: English (Fluent), Tamil

Professional Experience

Junior Web Developer **May 2025 – Present**
Leap Green Energy Pvt. Ltd., Coimbatore

- Built front-end applications for four live renewable energy platforms: leapmeteo.com (weather), leapvayu.com (state-wise wind forecast), leapsurya.com (solar forecast), and leapsakthi.com (demand forecast).
- Developed data-heavy dashboards using React.js, Tailwind CSS, and Recharts to visualize wind, solar, and demand forecast data.
- Integrated REST APIs with a type-safe client generated from OpenAPI specs, using request cancellation to keep map interactions responsive.
- Optimized backend APIs by reducing response times and adding pagination and caching; built Node.js endpoints where needed.
- Collaborated using Git and GitHub to deliver and maintain production releases.

Key Projects

Leap Meteo – Interactive Weather Forecasting Platform **leapmeteo.com**
React, TypeScript, MapLibre GL JS, WebGL 2, GLSL, Zustand, Vite, Vitest

- Built an interactive weather map with wind, temperature, rain, cloud, and pressure layers, and a model switcher for GFS, ECMWF, and AIFS forecasts.
- Engineered a custom WebGL 2 and GLSL layer on MapLibre GL JS to animate GPU-accelerated wind particles and render weather heatmaps.
- Offloaded 16-bit PNG tile decoding to Web Workers, keeping map panning and timeline playback smooth.
- Implemented client-side pressure isobars, a play/pause time slider, city and lat/lon search, unit switching, and a tropical cyclone tracker with forecast cones and storm tracks.
- Managed global state with Zustand (with localStorage persistence) and wrote unit tests with Vitest.

Bulk Mail App (MERN)
MongoDB, Express.js, React.js, Node.js, Nodemailer, Tailwind CSS

- Built a bulk email app with scheduling, contact management, and templates, using Nodemailer for email delivery.

FitTracker Pro – AI-Powered Fitness Analytics Platform
React 19, Vite, Tailwind CSS v4, Google Gemini API, Supabase (PostgreSQL), Vercel

- Built a progressive overload tracker with responsive dashboards for load progression, personal records, and volume per exercise.
- Integrated Google Gemini multimodal AI to parse meal photos and voice notes into macros and exercise logs.
- Secured per-user data with Supabase Auth and PostgreSQL Row-Level Security, with localStorage offline fallback; deployed on Vercel.

Education

B.E. Cyber Security **2020 – 2024**
Mahendra Engineering College, Namakkal CGPA: 8.25

Certifications

Full Stack MERN Development – Error Makes Clever (Certificate ID: EMCFSWDB1235)
